

TRACLUX35

L I G H T Y E A R S A H E A D

Save lots of money on your power bill while dramatically improving the quality of your lighting!

The New 2013 TRACLUX35 is the latest product designed for retail stores to replace inefficient Metal Halide or Halogen track lighting. Using high quality Citizen LEDs in a range of colours, coupled with high colour rendering qualities, the Traclux35 will ensure your stock is presented with true colour imaging making it far more appealing to your customers.

You will no longer experience stock losses due to light damage, as LED's do not emit harmful UV rays.

You will also benefit from a far lower electricity bill, coupled with a much cooler store as LED's emit far less heat.

Accepted under the NSW Energy Saving Scheme, you may be eligible to receive incentives which makes it far more viable.

Ask your Cleanenviro representative for information today.
